

Modified Bullseye Rig.

(as modified on sail number 696 in 1978)

Notes:

In this configuration all the blocks and winches have been replaced with Harken blocks and all cleats have been replaced by Harken cam cleats. The Genoa tracks are in the original "factory" location.

The Spinnaker lines are located on the cuddy to put them in easy access for the spinnaker operator.

Both Jib and Genoa sheets now lead to the center of the cockpit which allows for easy single handing and an easy straight on pull when heeling on a close haul (and your feet are on the leeward seat). The cam cleats are a special design (not Harken) which allows for uncleating to be a sideways pull rather than pulling up.

The Main sheet is unchanged.
